

What is claimed is:

1. Wood-burning oven having a plurality of baking chambers arranged one above the other, a combustion region and a flue-gas guidance, it being possible for the individual baking chambers to be closed off in relation to the flue-gas guidance by means of pivotable baking-chamber flaps, characterized in that flue-gas-duct flaps are arranged in the flue-gas guidance so as to produce a meandering flue-gas guidance when the flue-gas-duct flaps and at least some of the baking-chamber flaps are closed.
2. Wood-burning oven according to claim 1, characterized in that at least one fireclay brick is arranged above the combustion region.
3. Wood-burning oven according to claim 1, characterized in that an ash chamber, a grate and a firing carriage are provided in the combustion region.
4. Wood-burning oven according to claim 3, characterized in that the firing carriage is designed such that it can be pulled out.
5. Wood-burning oven according to claim 1, characterized in that stone tiles are provided for floors of the baking chambers.
6. Wood-burning oven according to claim 1, characterized in that a combustion chamber which

is not closed off in relation to the baking chambers is provided, with the result that flue gases pass to the sides of the combustion region in each case, along the at least one fireclay brick, to the baking chambers.

7. Wood-burning oven according to claim 1, characterized in that a flue-gas discharge is provided above the baking chambers.

8. Wood-burning oven according to claim 7, characterized in that a steaming arrangement is provided above the baking chambers and beneath the flue-gas discharge.

9. Wood-burning oven according to claim 8, characterized in that steam-feeding pipes to the baking chambers are provided.

10. Wood-burning oven according to claim 1, characterized in that walls, the floor and covering form a continuous metal structure, on which lever elements are arranged on a front side.
